IMPORTANT INFORMATION

Combi Boilers

As a matter of note when a Drain-down is completed we **DO NOT TOUCH** the central heating system or radiators.

Some people like to leave it on during the winter period on frost setting as per the manufacturer instructions, but please make sure that you have sufficient anti-freeze in the system and it is set up correctly.

We can replace the old antifreeze in the system as per the manufacturer's requirement, at a charge of £30.00 plus the required anti-freeze (this varies depending on the size of the system) + VAT. If you are unsure we can test the strength of the antifreeze for you and produce a report for £20.00 + VAT. This work does really need to be done prior to drain down, please ring us to book in this service if required. It is advisable that this is done on an annual basis.
